Equipment Requisition Management System | CYNXX

Backend Developer (Project Collaboration)

- **Engineered a scalable backend server** using **Node.js** and **Express.js** to manage equipment requests and system workflows.
- **Containerized the application** using **Docker**, ensuring environment parity across development, testing, and production stages.
- **Architected a CI/CD pipeline** via **GitHub Actions** to automate linting, testing, and deployment, reducing manual overhead and deployment errors.
- **Implemented a comprehensive testing strategy** using **Jest**, conducting both unit and integration tests to maintain high code reliability.
- **Enforced code quality standards** by integrating **ESLint**, ensuring a clean, maintainable, and standardized codebase for team collaboration.
- **Managed cloud orchestration** by deploying the service to **Render**, configuring web services for high availability and performance.

Full Stack Developer | CBytes

September 2024 – Present

- **Architected and deployed** a comprehensive profiling hierarchy system; resolved complex database structures to support multi-level data relationships, automated report generation, and intuitive user navigation.
- **Spearheaded the end-to-end migration** of a legacy C# WinForms ecosystem into a modern web application, successfully refactoring outdated Hungarian notation into clean, maintainable code.
- **Engineered performance optimizations** that achieved a 30% increase in data load speeds and significantly improved transaction throughput and system stability.
- **Accelerated development cycles** by integrating AI-assisted technologies (such as GitHub Copilot and LLMs) into the workflow, reducing manual coding overhead and minimizing production bugs.
- **Modernized the technical stack** by introducing high-efficiency development tools and establishing best practices for code quality and faster project delivery.

Full-Stack Development Projects | Developer & Contributor

Various (Academic, Freelance, & Internships)

- **End-to-End Web Solutions:** Developed and deployed multiple full-stack applications—including Municipal Residency and Graveyard Management systems—using React.js, PHP, and MySQL.
- **Advanced Technology Integration:** Successfully implemented **Blockchain** technology for document security and integrated Google Maps API for geospatial tracking and location-based services.

- UI/UX Optimization: Designed modern, responsive user interfaces using **Material UI** and Bootstrap to improve user engagement and administrative efficiency.
- System Maintenance: Provided ongoing support for legacy systems, handling the deployment, debugging, and feature enhancement of existing PHP-based platforms.

Skills

Engineering & Tooling

- Containerization: Docker
- CI/CD: GitHub Actions
- Code Quality: ESLint
- Testing: Jest

AI Assistive Coding

- Lovable, Gemini, Codex, Claude

Database

- Relational: MySQL, MSSQL, PostgreSQL

Front-end

- Frameworks: React.js
- UI Libraries: Material-UI
- State & Data: TanStack (Query/Table), Zod, React Hook orm (RHF)
- Language: TypeScript

Back-end

- Runtimes & Frameworks: Node.js, Express, PHP, C# ASP.NET Core
- Authentication: JWT

BS in Computer Science

2019 – 2023

STI West Negros University

Bacolod City, Negros Occidental
